ABOUT ME

Backend Developer with a background in Systems Engineering and hands-on experience building scalable backend systems and modern software architectures. Experienced in Java (Quarkus, Spring Boot) and Python, with a strong focus on microservices, event-driven architecture, and clean architecture principles.

EXPERIENCE

Sales Specialist - English C1

Teleperformance - Bogotá, CO   2024 - 2025

- Delivered sales support in an international English-speaking environment.
- Consistently exceeded performance targets with an average sales rate of 22%
- Strengthened communication, negotiation, and customer-oriented skills.

Software Developer

Haedcom Ingeniería S.A.S - Bogotá, CO   2024 - 2025

- Developed an access control application with facial recognition, focused on security and regulatory compliance.
- Designed and implemented backend services for security and access control systems.
- Collaborated in deployments for more than 12 enterprise clients.

PROJECTS

Access Control System

- Designed and developed backend services using Java (Quarkus).
- Applied event-driven and clean architecture principles.
- Implemented REST APIs and database integrations.
